LIVE BUILD · N8N × GOHIGHLEVEL

New lead → instant reply, fully automated

A website form submission becomes a scored CRM contact and an automatic email back to the lead — with no human in the loop. Built and tested on a live instance.

Sergios
Automation & AI Integration
n8n · GoHighLevel · Webhooks

Webhook intake · Field normalization · Validation · Lead scoring (hot / warm / cold) · GoHighLevel API · Tag-triggered auto-email

1 Lead captured via webhook

A form, ad, or landing page posts the lead to an n8n webhook endpoint. Fields are cleaned and standardized.

POST → /webhook/new-lead

2 Validated & scored in n8n

Missing-data leads are rejected; valid ones are scored on business email, phone and message detail, then labelled hot, warm, or cold.

Auto-scoring · routing logic

3 Contact created in GoHighLevel

The lead is pushed into the CRM via API and auto-tagged **new-lead** plus its temperature — zero manual entry.

Real contacts created live

4 Instant auto-response email

A GoHighLevel workflow triggers on the **new-lead** tag and emails the lead immediately — delivered to a real inbox in seconds.

Verified: email received

Every requirement — done & proven

- ✓ **Lead source connected via webhook** — Works with a form, ad, or website
- ✓ **One n8n workflow built** — Normalize → validate → score → sync
- ✓ **Automated lead-response action** — Instant email on the new-lead tag
- ✓ **Demonstrated working end-to-end** — Live runs · real contacts · real inbox

Ready to connect to your live lead source and extend into SMS, voice agents & calendar routing.
